

Argument:

The discovery of a new planet, Kepler-186f, means that there may be another planet with life in the universe. It might be a 'Goldilocks Planet.' The planet might have water. It orbits a star, and it isn't too far or too close to the star. There might be life on the star.

What are some things you would need to know about or have explained in this argument to make it clear and convincing?

Evidence	This Evidence matters because....	Therefore....
Kepler-186f might have liquid water on it.	<i>A planet that has liquid water can support life.</i>	The discovery of a new planet, Kepler-186f, means that there may be another planet with life in the universe.
Kepler-186f's orbit is not too close to the star it orbits.		
Kepler-186f's orbit is not too far from the star it orbits.
